Translation Services

Speed and accuracy driven by advanced artificial intelligence and neural machine technology

Translations are a critical and recurring component throughout a drug's development and commercialization. Poor translation can have an impact on trial timelines out of all proportion to their cost by, for example triggering start up delays.

Project management, speed, accuracy and the security of information are all critical but not widely delivered by translation companies today and this can be a key factor in getting drugs to market on time.

IQVIA has developed an advanced translation system that delivers multilingual content quickly, accurately and securely using advanced artificial intelligence and neural machine technology, specifically for the pharmaceutical industry - all at a totally transparent cost.

And, because IQVIA is itself embedded in life sciences, our translations are supplemented by IQVIA domain expertise which cannot be matched by any other translation supplier giving you confidence in both translation quality and consistency of terminology. In addition, because we keep your project in-house at IQVIA you have simplified project management and a single point of contact throughout the project lifecycle.

✓ Fast delivery of translations supports rapid trial completion and drugs to market faster

✓ High quality translations enabled by domain expertise and corpora of medical data using accurate and relevant terminology

✓ Improved cost effectiveness and control of budget

✓ Deep expertise in cyber protection and data security

- Single point of accountability and alignment with project leadership

- AI and neural machine technology

- Simplified process and steps

- Deep understanding of regulatory environment

- All-inclusive pricing for easy budgeting

- Fast, accurate translations

- World's largest corpora of medical data
